

ANRIC RAIL SCRUBBER MK 3

# RAIL SCRUBBER

## DESIGNED TO ELIMINATE THE NEED FOR A LOCOMOTIVE SHUT TEST ON RAILWAY TRACKS.

The Anric Rail scrubber MK 3 is a device that's used as a surface finishing apparatus for a rail of a railway track to alleviate the need for a Locomotive shut test.

Designed and built by the Anric Rail engineering team, the scrubber MK 3 utilises two different types of brush technology's that spin at 6000rpm, mounted to a perpetually applying force system to the rail head. The system removes dirt, grit, grease and paint from the head of the rail to allow a clean contact band for shut testing.
